

Formoa Surface Activator

Formoa Surface Activator is a cleaner/ adhesion promoter that can be used with all Formoa products to increase adhesion and durability. For use on non-porous substrates such as metals and composites.

Remove any surface dust, swarf or heavy contamination

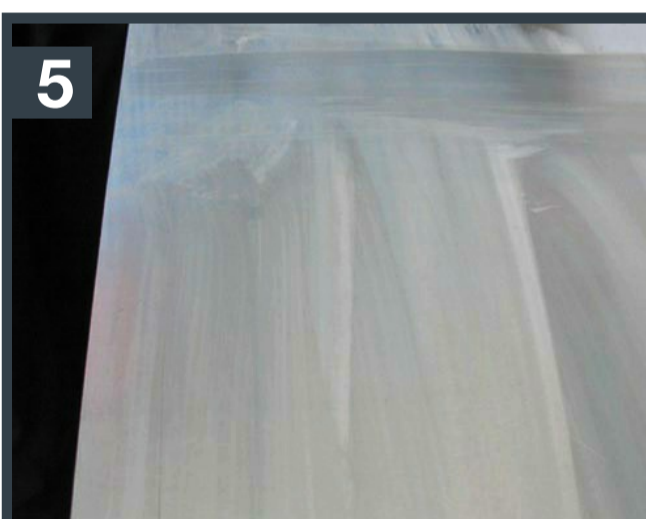

Before use ensure that surface activator is 'crystal clear'

Wipe in one direction only.

Allow 10 minutes to flash off.

The white residue is correct - it is the adhesion promoter.

Apply adhesive within 4 hours

Care points:

- 1 Keep lids on containers when not in use - the product will hydrolyse with prolonged exposure to air and lose its effectiveness.
- 2 It is not a remover/ cleaner and should not be used on finished surfaces e.g. floor coverings, gel coat, laminate side casings, etc.
- 3 Change the surface of your lint free cloth after every linear meter
